

Hydra Collection Extensions

Pages affected by the Collection Extensions Working Group Recommendations

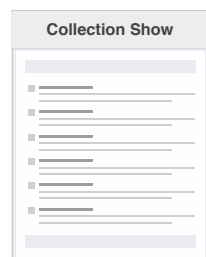

Public pages

- Global search box: “Collections” search constraint
- Main menu: Potential “Collections” menu item for easy access to list of collections
- Potential for featuring collections on homepage

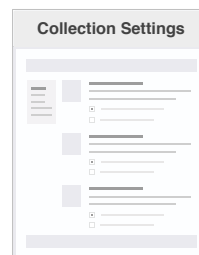

- Facets: “Collections” facet available whenever facets are shown
- Distinguish types of collections (e.g., label) in results that include collections

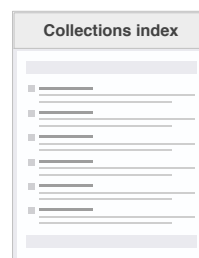

- Optional branding shown
 - List includes works/nested collections
 - Search within collection
- If user has appropriate role:*
- Edit / Delete buttons
 - Add Work / Create Work buttons
 - Add (new | existing) Subcollection button

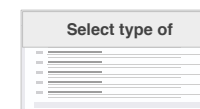

Administration pages

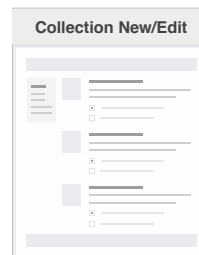

- Define collection types
- Collection type configuration, with settings for each collection type:
 - Participants (managers and creators)
 - Nestable?
 - Multiple membership?
 - Discoverable?
 - etc.

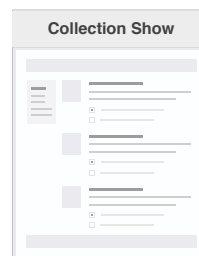

- Button: Create new collection
- Show list of collections user can manage or deposit into
- Actions for collections:
 - Show collection
 - Add works to collection
 - Deposit new works through collection

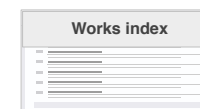

- Select type of collection to create

- Edit collection description
- Edit collection branding
- Edit collection visibility
- Edit collection sharing
- Edit collection workflow
- Delete collection

- Show list of items in collection
- Actions for collections:
 - Edit collection
 - Add works to collection
 - Deposit new works through collection
 - Remove works from collection

- Bulk action: Add selected works to collection

- Add work to collection(s)

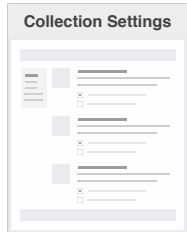

Hydra Collection Extensions

Page flows for collection-related tasks

Define new collection type *Establish new type of collection and specify who can create collections of that type*

[Repository manager](#)

CONFIGURATION > SETTINGS > COLLECTIONS

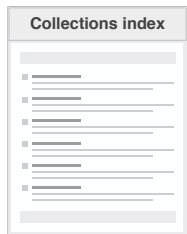

Actions:

- Name new collection type
- Define settings for type
- Add participants for type

Create new collection *Create new collection and add metadata, define visibility, sharing, etc.*

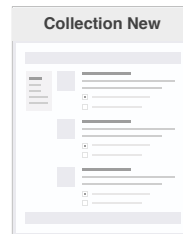

[Manager for collection type?](#)
[Creator for collection type](#)

REPOSITORY CONTENTS > COLLECTIONS

Actions:

- Select "Create new collection" button

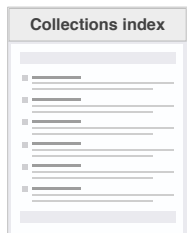

Actions:

- Use tabs to specify details for:
 - Description/metadata
 - Branding
 - Visibility
 - Sharing
 - Workflow (if enabled)

Edit existing collection *Edit existing collection to update metadata, define visibility, sharing, etc. or to remove items from collection*

[Manager for collection type?](#)
[Creator for collection type](#)

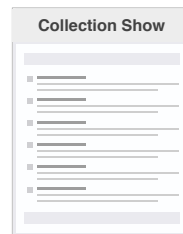

REPOSITORY CONTENTS > COLLECTIONS

Actions:

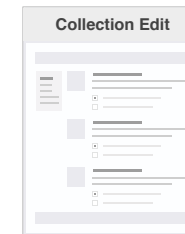

- Select title of collection to view

- Select "Edit collection" from Actions menu of collection to edit

Actions:

- Remove unwanted items
- Select "Edit collection" button

Actions:

- Use tabs to update details:
 - Description/metadata
 - Branding
 - Visibility
 - Sharing
 - Workflow (if enabled)

Collection Types

3 collection types in this repository

Create new collection type

Collection types enable you to define settings that govern collections that serve different purposes in your repository. You can define as many collection types as you need.

[More about collection types](#) 3

Current Collection Types

NAME	ACTIONS
Administrative Set	Edit 4
User collection	Edit Delete
Exhibit	Edit Delete 5

1 The "Administrative Sets" menu item has been removed, because the working assumption is that Administrative Sets are now just part of collections, and there is one required collection that exists by default called "Administrative Set." This can be renamed but not deleted, to ensure that works always belong to at least one collection.

2 At the time of creating this mockup, Hyrax does not have secondary menu items for Settings, but I believe it should, to support this Collection types settings page and other future configuration settings. It should probably just follow the Settings menu pattern currently in Hyku.

3 This link is the trigger for an expand/collapse section that is collapsed on page load. When expanded, the section looks like this:

4 The default collection type "Administrative Set" can be renamed but not deleted, to ensure that works always belong to at least one collection.

5 The "Delete" button triggers a confirmation modal so the user can confirm the deletion.

[Less about collection types](#)

If there are no existing collections of the collection type to be deleted, then the confirmation modal is straightforward:

Typical scenarios for collection types include:

- **User Collections** that any registered user can create to organize items they deposit
- **Exhibits** that staff create and curate for public display, where items can be included in any number of exhibits
- **Controlled Collections** created and managed by staff and not intended for public display, such as collections associated with organizational units or departments
- **Community Collections** that are intended for public display, similar to how DSpace communities and collections are sometimes used

Deleting this collection type will permanently remove the type and its settings from the repository. Are you sure you want to delete this collection type?

[Cancel](#) [Delete](#)

If there are **existing collections** of the collection type to be deleted we don't allow deletion. The confirmation modal for that case:

You cannot delete this collection type because one or more collections of this type have already been created.

To delete this collection type, first ensure that all collections of this type have been deleted.

[Cancel](#) [View collections of this type](#)

1 The same form is used for new and edit. The only difference is the title and breadcrumb. If we were editing the "User Collection" type, the title and breadcrumb would be "Edit Collection Type: User Collection". (If horizontal space is a potential problem, the breadcrumb could just be "Edit Collection Type.")

Workflow Roles

Create New Collection Type

Description Settings Participants

These settings determine how collections of the type "User Collection" can be managed and discovered.

Warning: These settings cannot be changed after a collection of this type has been created.

- NESTABLE** Allow collections to be nested (a collection can contain other collections)
- DISCOVERY** Allow collections to be discoverable
- SHARING** Allow users to assign collection managers, depositors, and viewers for collections they manage
- REQUIRE MEMBERSHIP** A work must belong to at least one collection of this type
- MULTIPLE MEMBERSHIP** Allow a work to belong to multiple collections
- WORKFLOW** Allow collections of this type to assign workflow to a new work
- VISIBILITY** Allow collections of this type to assign initial visibility settings to a new work
- CONTROL VISIBILITY** Visibility of works in collections of this type are controlled by the settings in the collection

1

Save Cancel

1 For the default "Administrative Set" collection type only, the **Nestable** and **Multiple Membership** options should be disabled, to ensure that type continues to meet the existing functionality of Administrative Sets. So for that type only, the options look like this:

- NESTABLE** Allow collections to be nested (a collection can contain other collections)
- DISCOVERY** Allow collections to be discoverable
- SHARING** Allow users to assign collection managers, depositors, and viewers for collections they manage
- REQUIRE MEMBERSHIP** A work must belong to at least one collection of this type
- MULTIPLE MEMBERSHIP** Allow a work to belong to multiple collections
- WORKFLOW** Allow collections of this type to assign workflow to a new work
- VISIBILITY** Allow collections of this type to assign initial visibility settings to a new work
- CONTROL VISIBILITY** Visibility of works in collections of this type are controlled by the settings in the collection

Branding

Optionally, you can upload a banner image and/or logo images to associate with this collection. If uploaded, these images will be displayed at the top of the collection page to provide unique branding for the collection.

Banner

An image to be displayed at the top of the collection page. For best results, upload an image (JPG, GIF or PNG) that is at least 120 pixels tall and 1200 pixels wide.

Choose file... No file chosen. 1

Logo image

One or more images to be displayed at the top of the collection page. For best results, upload an image (JPG, GIF or PNG) that is 40 pixels in height. Larger images will be resized to 40 pixels in height. 2

Choose file... No file chosen. 3

1 The user needs to be able to delete an existing banner, so if one is currently active, show a remove button:

2 40px height is a guess. We should revisit this when we have a new Collection Show page implemented and see what is the optimal height.

Banner

An image to be displayed at the top of the collection page. For best results, upload an image (JPG, GIF or PNG) that is at least 120 pixels tall and 1200 pixels wide.

Choose file... some-banner-image.jpg Remove image

3 The user needs to be able to delete existing images, so after at least one has been uploaded display in a table as shown below with a remove button. If we want to enable the logo images to be linked, the table should also have inputs for each image to enable the user to add a link and alt text for the image.

Logo image

One or more images to be displayed at the top of the collection page. For best results, upload an image (JPG, GIF or PNG) that is 40 pixels in height. Larger images will be resized to 40 pixels in height.

Choose file... No file chosen.

This Collection in Other Collections

You can add this collection to other collections as a sub-collection.

Add to collection:

This collection is currently a sub-collection of these collections

Collection title	Action
Butterflies: Our Favorites!	<input type="button" value="Remove from collection"/>
Recent Published Research Publications and Data On Macrolepidopteran Clade	<input type="button" value="Remove from collection"/>

Other Collections in This Collection

You can add other collections as sub-collections of this collection.

Add sub-collection:

These collections are currently sub-collections of this collection

Collection title	Action
Butterfly images from the Stanford Digital Repository	<input type="button" value="Remove this sub-collection"/>
Laboratory Experiments involving Lepidoptera	<input type="button" value="Remove this sub-collection"/>

1 The list of existing collections titles should also include the type of each collection after the collection title (applies to both sections):

Select a collection... ▾

- Collection One (User collection)
- Collection Two (Exhibit)
- ...

3 If there are not currently any sub-collections, or if this collection is not a sub-collection of another collection, do not display the relevant section(s) (lead-in sentence and table).

4 When the user selects "Remove from collection" show a confirmation modal:

Removing this collection will not remove it from the repository, only from this parent collection. Are you sure you want to remove this collection?

2 A collection cannot be an ancestor of itself so either A) the select menu should omit the current collection (preferred) or B) when the Add button is selected we should check to see if the selected collection is the current collection. If so, display a warning modal that says "This collection cannot be a sub-collection of itself."

5 When the user selects "Remove this sub-collection" show a confirmation modal:

Removing this sub-collection will not remove it from the repository, only from this collection. Are you sure you want to remove this sub-collection?

Create New Collection

- Description
- Branding
- Relationships
- Sharing
- Visibility 1
- Discovery
- Workflow

The release and visibility settings below control when new works deposited through this collection are made available for discovery and download and who can discover and download them.

Release

You can impose a delay (embargo) before works in this collection are released for discovery and download.

- No delay -- release all works as soon as they are deposited
- Varies -- depositors can set the release date for an individual work:
 - Between "now" and
 - Between "now" and
- Fixed -- delay release of all works until

Visibility

After its release date, works in this collection can be discovered and downloaded by:

- Everyone -- all works in this collection will be public
- Varies -- default is public, but depositors can restrict the visibility of individual works
- Institution -- all works will be visible only to authenticated users of this institution
- Restricted -- all works will be visible only to repository managers and managers and reviewers of this collection

1 This tab should only be shown if the "Control Visibility" setting has been enabled in the General Settings for this collection type.

1 The "All Collections" tab is shown if the user has privileges to manage **all collections** in the repository (e.g., the repository manager/administrator).

If the user is not a repository manager/administrator but has privileges to manage collections other than ones she created, this tab should instead be labelled "Managed Collections".

The first tab is not shown at all to users who can only manage collections they've created.

2 **Type options:** [user | curated | etc] (Actual names should reflect the collections types defined for the repository.)

Visibility options: [Private | Public | Institution]

When the user selects one or more filters, the filter bar expands to show the current filter constraints, as is currently done on the Works index page.

Select type of collection

User Collection
Intended for individual users to organize items and, optionally, make public or share with others.

Exhibit
A collection to be shared with the public to highlight a repository theme or event.

Close Create collection

3 If a repository has configured multiple collection types and it's possible for a given user to have creator privileges for more than one collection type, I believe we need to know which collection type the user wants to create before we display the Collection New page. If this is true, then one option would be to use the same approach as we currently do for creating new works, with a Select Collection Type modal:

4 Ideally, this is implemented as a Datatable, so the search box filters results and table columns are sortable.

5 Collection titles are linked to the Admin show page for the collection.

Showing 1 to 10 of 105 works

¹ Both of these tabs already exist on the Hyrax Works index page. The mockup here is just to illustrate how works can be added to a collection using the bulk and action select menus.

Note because of outstanding tickets the content of the table might differ from what is currently in Hyrax and that there might be individual buttons for the actions listed on the Bulk actions menu (though I believe the buttons should be replaced with a select menu, as specified in Hyrax #825).

² Bulk actions apply to every work currently checked. Options:

Bulk actions ▾

- Edit selected works
- Delete selected works
- Add selected works to existing collection ⁴
- Add selected works to new collection
- Move selected to different administrative set

⁴ Selecting these choices from either the bulk or action select menus leads to this existing modal window:

Add to collection ✕

Select the collection to add your files to:

- Test Collection Close Update Collection
- 2016 Research Publications Add to new Collection
- My Favorite Data Sets

³ Actions menu options:

Select ▾

- Edit work
- Delete work
- Add work to existing collection ⁴
- Add work to new collection
- Highlight work on profile
- Transfer ownership of work

Although I think we should redesign this modal. Not only is the layout less than ideal, I don't think it will work very well when there are many collections to choose from.

My Favorite Maps	<input type="button" value="Remove from collection"/>

Other Works in This Work

Add child work:

This work currently contains these child works

Work title	Action
Stanford Mobile Visual Search Dataset	<input type="button" value="Remove from this work"/>
Old-Timey Baseball Photograph	<input type="button" value="Remove from this work"/>

1 The list of existing collections titles should also include the type of each collection after the collection title:

Select a collection

- California Seals (Exhibit)
- Butterfly Research Images and Data Files (User Collection)
- Historic baseball photographs (Exhibit)
- Drought Research Files and Data (User Collection)

3 This is a reorganization of the current "Other Works in this Work" section of the Works > Relationships tab. The goal is for it to parallel the structure of the Collections section.

2 When the user selects "Remove from collection" show a confirmation modal:

Removing this work will not remove it from the repository, only from this collection. Are you sure you want to remove this work from the collection?

4 When the user selects "Remove from this work":

Removing this child work will not remove it from the repository, only from this parent work. Are you sure you want to remove this work from this parent work?

- 1 An institution that wanted to make their collections readily accessible from anywhere on the site could add a “Collections” menu item.
- 2 “Collections” could be added to the select menu to scope results to collections.
- 3 This slot could also be used to feature a collection.

1 This is an alternative for showing results with both works and collections. Rather than mixing the two types, they're separated so the user can more easily focus on the type of interest.

This link would go to search results page faceted by the current constraints plus Object type > Collection.

2 Results in the default area are only works.

1 This is an example of a nested sub-collection (in fact, a sub-collection of another sub-collection). The page is basically the same as a top-level collection show page, but with this collection breadcrumb added. (This is also an example of a collection with no banner image added.)
