

Researchers

- Better opportunities for citation / impact
- Preservation of data
- Avoidance of submission systems

Repositories

- Additional services for users
- Article link referrals
- Better metadata, aligned with publications

Publishers

- Efficient submissions
- Better metadata
- Repository link referrals

Funders

- Better impact from funding
- Improved reproducibility
- Preservation of data

Project phases

1 Feasibility study

- RDA publisher workflow analysis
- Survey repositories and publishers
- Overwhelmingly positive feedback

2 Proof of concept

- API specification
- Prototype Sufia based application
- Community building

3 Business development

- UX review
- Business case
- Steering committee

4 Now Production

- Production application
- Partner integrations
- Operational service
- www.data2paper.org

Nick Loman @pathogenomenick · 29 Aug 2014
Ahh, come here **journal submission** site -- let me feel your warm embrace. What a lovely long form!

Dr Katherine James @KJames_IntBio · 13 Feb 2015
Well, this **journal submission** form is utterly delightful, I'm not losing the will to live at all. Honest... *curls up under desk and weeps*

Benjamin Saunders @BenSaunders · 20 Jan 2014
It's not the most frustrating part of science, but navigating the online **submission system** of a journal has to break the top 10 for me

Anne Carpenter @DrAnneCarpenter · 31 Aug 2015
Our **supplemental data** just crashed the journal's submission servers. Whoopsies. #BigData

Andre Nantel @nantel · 7 Nov 2013
Trying to submit a systems biology paper with lots of modelling data but the **journal submission** system will only accept Excel or PDF files.

Susan Johnston @SuseJohnston · 1 Dec 2015
Submission to journal took several hours with limitations on size of supplementary data. Re-uploading to @biorxivpreprint took about 5 mins.

Pat Schloss @PatSchloss · 21 Nov 2014
data should not be made available upon acceptance to a journal. they should be made available upon **submission**.
