Tufts Online Exhibits

A collaboration between Tisch Library, Digital Collections and Archives, and Educational Technology Services

---

Showcases digital content from Tufts libraries and archives

Unified with Tufts repository infrastructure
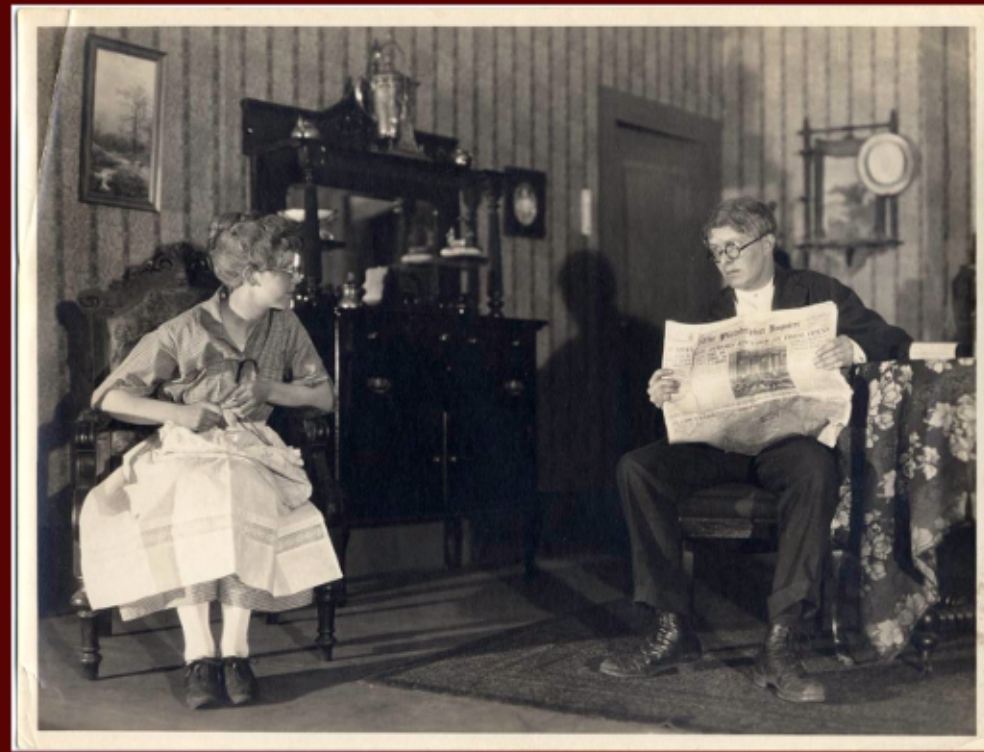

Allows users to display content not held in the TDL

Customizations

Created custom, Fedora 3 item type, which imports assets and metadata from Fedora 3.

Site title is customizable based on exhibit tags.

Curators can hide specific feature pages from main and sidebar site navigation.

Added captions to content previously without captions.

Future Plans

Support PDFs and audio files.

Add ability to completely remove items from exhibits.

Support superscript links inside captions and text blocks.

Add multiple heading types.

Challenges

Having a custom item type complicates the upgrade process.

The custom item type will require rewrites after we migrate to Fedora 4.

We don't have a IIIF server yet, so that requires work-arounds for now.

Some users would like more customization across different exhibits.
