We built functionality that allowed our users to import raw XML, as well as metadata from spreadsheets. This has allowed for mass import, revision, and export of metadata.

Combined with our XML history and editor tools that focus on individual items, we have encompassed all steps in the lifecycle.

Description

Description

The thirty-day period from January 24 through February 22, 2015 produced record breaking freezing temperatures and snowfall across the metro Boston region. During that time, 94.4 inches of snow fell on the streets of Boston. Half of the total snowfall (48 inches) came as the result of two storm systems which pummeled the Boston area in close succession: Winter Storm Juno from January 26 to 28 and Winter

A standard form, as often found in Samvera installations.

While useful for regular users, we found many staff required far more flexible and powerful tools for their metadata needs.

XML Editor

This is just a preview. Click "Save" to apply your changes.

An XML editor was built as part of our digital repository so our users can preview their changes and validate their metadata.

Given the discrepancy between how XML is stored vs. displayed, this was a highly requested feature.

We built a tool for our metadata specialists to view changes to XML over time.

By giving them visual diff information and the ability to revert to specific steps in time, it allowed for context and safety.
