

Valkyrie Update - Samvera Partners 2020

2020 - A lot has happened, but not with this project!

Just Two Releases, 2.1 & 2.1.1

2.1 added model filters to several queries (`find_references_by(model:)`, `count_all_of_model`, `find_inverse_references_by(model:)`)

2.1 was the result of several external contributors & especially the 2019 Samvera Connect Hackathon, now up to 29 contributors.

2.1.1 added Ruby 2.7 Support & fixed `Valkyrie::ID` equality for Hyrax.

Other News..

- Confirmed Fedora 6 Support
- Another 3-hour Hackathon happening at Samvera Connect 2020
- Duke moved to a fully Valkyrie-powered repository!

What About 3.x?

- Our 2020 Roadmap can be found here: <https://github.com/samvera/valkyrie/projects/2>
- We didn't get too far, there's been higher priorities for partners.
- 3.x probably some time this year, there's a high-ish priority race condition to get fixed, and remove things like Draper.

How stable are we?

- We feel very stable! Princeton hasn't needed patches in quite a while, other institutions haven't asked for anything. Dependencies have been going strong.
- Hyrax work seems to be going forward without any large feature requests. Only recently asked for standardized transaction support - likely look into that for 3.x.
- Princeton now running > 4 million files, dozens of TB of data, often ingesting several books a day without issue.

How Can You Help?

- We need a new product owner! We'll be announcing this at Samvera Connect, if your staff is interested please have them get in touch with me.
- There may be time next year to do a sprint. Keep an eye out.

What about Hyrax support?

- All I can say is they're working on it, and that work seems to be going well. Hopefully the Hyrax technical lead can speak more to this.
